

ABSTRACT

Thermoplastic composition comprising a thermoplastic elastomer, a polyolefin resin, and possibly additive(s) and/or filler(s), characterized in that the thermoplastic elastomer is a mixture comprising a not cross-linked thermoplastic SIS elastomer and a thermoplastic elastomer which is at least partially cross-linked, the weight ratio not cross-linked thermoplastic SIS elastomer/thermoplastic elastomer at least partially cross-linked being comprised between 1:10 and 5:1, preferably between 1:6 and 2.5:1.
